

INTERMEDIATE WEB DEVELOPMENT FINAL PROJECT PLAN

Janene Parmet

07/03/07

I would like to do a web site for my electronic portfolio. It is a requirement of MU but I think that it would be a wise investment anyway. Because it involves my future, I am motivated to do a good job and use my time wisely in this class to get it done. I have seen a few portfolios belonging to others and they are ok, but for the most part unimpressive. I would like to add a little flare with both color and programming to make mine more unique.

Title: Janene Parmet's Electronic Portfolio

Purpose: This is a website that I will use for my student portfolio as required by MU.

Target Audience: This site would be viewed by teachers, advisors, peers and future employers.

Website Architecture: At this time, the site will feature traditional navigation techniques, i.e., the use of a sidebar, or perhaps tabs located at the top of a home page (all-in-one).

Website Content: There will be categories of things that I deem important to my viewers such as:

- Learning beliefs
- Program of Study
- Resume
- Artifacts
- What my degree is about
- Information about MU
- Other information that doesn't fall into above categories (this may include audio of an introduction of me).

Interactive Effects: I am planning on having at least two of the following:

- a double menu
- a slide show
- a quote or message of the day

Janene Parmet's Electronic Portfolio

Master's of Education
Information Science & Learning Technologies

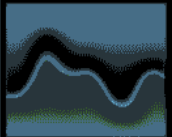

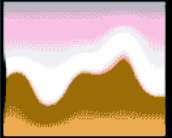

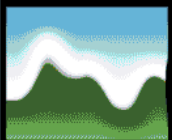

Learning Systems Design & Development Emphasis
University of Missouri – Columbia

MENU STRUCTURE
- probably a navigation
bar with double
menu.

INTRO and CHANGING INFORMATION

Message of the day

Slide Show of artifacts

DESCRIPTION OF SLIDES
